What is a Music Synthesizer?

Problems For Musicians

- Unable to pinpoint sound characteristics
- Unfamiliar with components that make a sound
- Lack proper knowledge to communicate ideas

Solution: Ear Training

Recognize fundamental characteristics of sounds

Enhance your skill set, communication, and creativity

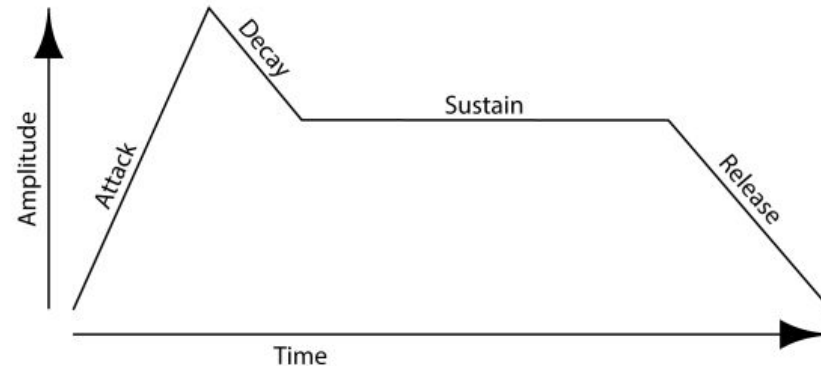

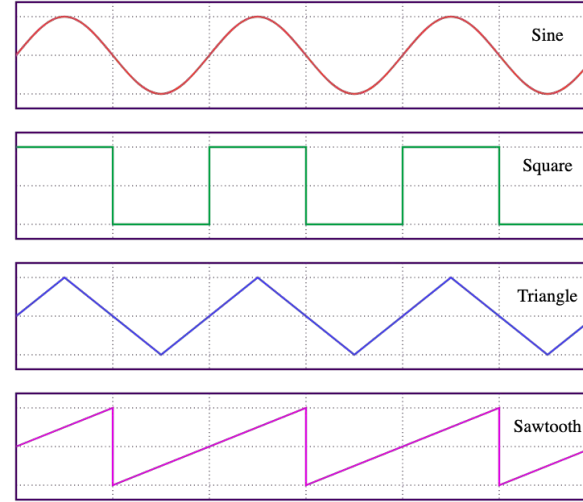

How Synth Trainer Works

1. The app randomly generates a sound using the parameters available to the user
2. The user attempts to recreate the sound using the synth interface
3. The user submits their sound
4. The app reveals the parameters of the randomly generated sound

Anticipated Results

- Waveform Recognition
 - Sine
 - Square
 - Sawtooth
 - Triangle
- ADSR Envelope Recognition
 - Attack
 - Decay
 - Sustain
 - Release

Technologies

Python

Audio Engine: Pyo

GUI: wxPython
